

STORAGE TANK STRUCTURE

ABSTRACT OF THE DISCLOSURE

5 The present invention provides a storage tank structure, including a support portion provided at a bottom surface of a hull to support a storage tank; a heat insulating member provided at opposite side surfaces of the support portion; a groove portion provided at a predetermined height of the support portion and defined perpendicular to a height direction of the support portion; and a plate portion extending to a predetermined length in a longitudinal
10 direction of the groove portion. Inside of the groove is filled with an adhesive portion.
