

ABSTRACT

5 A target recognition method and apparatus, a storage medium and an
electronic device. The target recognition method comprises: acquiring a first image
and a second image (S102), the first image and the second image both containing a
target to be determined; based on the first image and the second image, generating a
prediction path (S104), two ends of the prediction path respectively corresponding to
the first image and the second image; performing validity judgement on the prediction
10 path, and determining, based on a judgement result, whether the target to be
determined in the first image and the second image are the same target to be
determined (S106).
