FIG. 17

200

A receiving terminal receives resource scheduling information sent by a sending terminal, where the resource scheduling information includes a bit sequence used to indicate to-be-allocated resource units actually obtained by dividing the to-be-allocated frequency domain resource, and at least some bits in the bit sequence are used to indicate whether a to-be-allocated resource unit actually obtained by dividing the to-be-allocated frequency domain resource is in one or more resource unit positions in the positions of the resource units possibly obtained by dividing the to-be-allocated frequency domain resource

S210

Determine, according to the resource scheduling information, a to-be-allocated resource unit allocated by the sending terminal
