

Trampolin

ABSTRACT

The invention relates to a trampoline having a circumferential frame (1), a bounce mat which is elastically suspended on the frame (1), a guide (7) which is attached to the frame (1), a bar (5) which is height-adjustably accommodated in the guide (7), and an internal piece (12) which is movably accommodated in the guide (7). The bar (5) is secured by a relative movement between the internal piece (7) and the guide (12). The invention provides high clamping power.
