

Absorbent Article

[Abstract]

The absorbent article (1) including a main body sheet overlapping the absorber, a fastening member (20) that is joined to a widthwise outer end of the main body sheet. The widthwise outer end of the main body sheet is folded back starting from a fold line along a longitudinal direction of the absorber, and is temporarily fixed releasably, via a second joined unit (32), to the main body sheet arranged widthwise inwardly of the fold line. The second joined unit is arranged longitudinal outwardly of a widthwise region extending from the fastening distal end that the main body sheet and fastening member is overlap, in the widthwise direction and longitudinal inwardly of the widthwise region, respectively.
