ABSTRACT

Provided are a search content matching method, an electronic device and a storage medium. The search content matching method includes steps described below. At least one target meeting record including target search content is determined (S110, S410) according to the target search content. Abstract information corresponding to each target meeting record of the at least one target meeting record is displayed (S120, S430), and target content matching the target search content is distinctively displayed in the abstract information.
