

ABSTRACT

INFORMATION PROVIDING SERVICE SYSTEM FOR RAILROAD USERS

5 To provide an information providing service system for
railroad users, which enables provision of appropriate
information according to a running status or the like of a
train used by railroad users to improve convenience when
the railroad users acquire information. A passenger who is
10 holding an IC ticket 7 with a wireless communication
function and is on a car 1 can acquire car information held
by a train-information management device 2 or information
held by a ground system 8 based on the car information held
by the train-information management device 2 via wireless
15 communication of the IC ticket 7, and the passenger can
confirm the acquired information on a display screen of the
IC ticket 7.
