

**A METHOD FOR CLEANING STATIC PRECIPITATOR
AND A DEVICE THEREOF**

ABSTRACT OF THE DISCLOSURE

5 A method for cleaning static precipitator and a device
thereof. Hot air and steam are repeatedly filled into
an oil-collecting sink of the static precipitator at
different time or at the same time for heating and
melting the oil dirt attaching to the static panels,
making the oil dirt drop down into a collecting section.
10 The static panels can be harmlessly cleaned up without
disassembly or using any scraper. Hot air also serves
to shorten the drying time for the static panels.

Figure 2 shall accompany the publication of the
abstract.
