(54) Title: A METHOD AND A SYSTEM FOR MONITORING A PHYSIOLOGICAL PARAMETER OF A SUBJECT

FIG. 1

(57) Abstract: Embodiments provide a method which includes transmitting, by a receiving device (RD), a request message which includes a receiving device identification number (RDIN); receiving, by the RD, a registration message including a measuring device identification number (MDIN) from a measuring device (MD); registering, by the RD, the MD by means of the MDIN if the registration message from the MD includes the RDIN; receiving, by the RD, one or more data messages from the MD, each data message including the MDIN and a physiological parameter; and processing the physiological parameter in each data message, by the RD, if the MD has been registered by the RD. The range of the transmission of the request message between the RD and the MD is shorter than the range of the transmission of each data message between the MD and the RD, and/or the range of the transmission of the registration message between the MD and the RD is shorter than the range of the transmission of each data message between the MD and the RD. Embodiments also provide a corresponding monitoring system.
