

SLICERABSTRACT OF THE DISCLOSURE

[Subject]

5 To provide a slicer that can be used safely without causing a slip even when it is used with its tip end being pressed onto a chopping board or the like.

[Means to Solve Problems]

10 A slicer 1 provided with: a frame 10 having a pair of supporting arms 11; and a slicing blade 20 with its two ends being supported by the paired supporting arms 11, so that by reciprocally moving a material to be sliced in a slicing direction S toward the slicing blade 20, the material to be sliced is sliced, and in this structure, an anti-slipping
15 member 100, which is disposed under the frame 10 at a tip end thereof in the slicing direction S, with an elastomer resin being expanded on its surface, is further prepared.
