

ABSTRACT

TRAVEL SERVICE

The present invention relates to the method for reducing a burden on a traveler in trip reservation. Specifically, a travel system is provided, which is capable of preparing clothes, a home appliance, a cosmetic, etc. for a traveler at a trip destination as necessary without the need for bringing these items to reduce luggage. A travel management system is provided, which is operated by a program for executing a travel system application. The program executes the step of inputting traveler schedule information, rental product and/or consumables request information, and use schedule information, the step of transmitting the information to a management server via the Internet, the step of storing the schedule information, the request information, and the use schedule information in the management server, the step of producing and storing available rental product and/or consumables information in the management server, and the step of displaying the stored available information.
