

ABSTRACT OF THE DISCLOSURE

ACOUSTIC WAVE DEVICE AND METHOD OF PRODUCING THE SAME

An acoustic wave device includes: a first substrate that has a vibration unit that generates solid vibrations based on an input electric signal, and
5 an electrode pad unit that introduces the electric signal into the vibration unit; and a second substrate that has through holes for connecting the electrode pad unit to external electrodes. In this acoustic wave device, at least the vibration unit of the first
10 substrate is hermetically sealed by bonding the first substrate and the second substrate to each other.
