ABSTRACT

Provided is a method for generating musical accompaniment, including: acquiring musical data, wherein the musical data is divided into at least two musical beats, each of the musical beats comprising musical notes; extracting beat data information, chord data information, and melody data information from the musical data; generating musical accompaniment data based on the melody data information, the beat data information, and the chord data information; and obtaining musical accompaniment corresponding to the musical data by performing audio data rendering based on the musical accompaniment data.
