

ABSTRACT OF THE DISCLOSURE

Disclosed in the present application are a multimedia data synchronous playing method and apparatus, and a device and a medium. The method comprises: a first playing terminal acquiring playlist information of target multimedia data (S110); when the first playing terminal is a main playing terminal at a current moment, the first playing terminal generating target playing signaling on the basis of a playing progress of the target multimedia data, wherein the target playing signaling indicates a playing operation, which is executed by each playing terminal in a playing terminal set on content to be played in the target multimedia data at the next moment (S120); and the first playing terminal sending the target playing signaling to playing terminals in the playing terminal set other than the first playing terminal (S130).
