A B S T R A C T

TOPSHEET MADE OF NONWOVEN FABRIC
USED IN DISPOSABLE WEARING ARTICLE

5

A topsheet 2 for a disposable wearing article is formed with a plurality of fine openings 12 each having an area of about $0.16 - 5 \text{ mm}^2$ and a part of the peripheral edge of each opening is protuberated upward from upper
10 surface of the topsheet. The topsheet is thereby improved so that body fluids can be rapidly absorbed and stuffiness as well as eruption of the wearer's skin can be reliably avoided.
