

ABSTRACT

5 A lottery assembly and a packaging device are provided. The lottery assembly includes a lottery portion and a code portion, the code portion is provided with a first code area at a side surface thereof, and the lottery portion includes a lottery area and a second code area. The code
10 portion is separated from the lottery portion. First information of the first code area is in correspondence with second information of the lottery portion, and the first information of the first code area is in correspondence with third information of the second code area. The packaging device includes a housing and the above lottery assembly, and the housing defines an accommodation space for accommodating a commodity. The lottery portion is arranged in the
15 accommodation space, and at least part of the code portion is provided at an outer side of the housing to expose the first code area. The lottery assembly utilizes a lottery to provide an anti-counterfeiting function for the commodity, and does not occupy the external display area of an outer package of the commodity or is not required to change the existing outer package of the commodity.
