

Abstract

G00002

COATING TRANSFER DEVICE

A device for transferring a coating onto a paper or like surface from the outer surface of a transfer tape extending around a transfer head (4) protruding from a casing (2) and having a pair of transversely spaced apart guide members (3). A protective cover (8) is held within the casing when the device is used and has a front end portion (12) adapted to protrude from the casing for protecting the coating on the unused portion of the transfer tape when the device is out of use. The cover has an engaging portion (13) formed on the inner surface of its front end portion (12) for engaging with the bottom edges of the guide member at its front end to hold the cover in its position in which the device is out of use, while the engaging portion is engageable with a supporting portion (16) formed on the casing to hold the cover in its position in which the device is in use.
