

ABSTRACT OF THE DISCLOSURE

TITLE OF THE INVENTION: ABSORBENT ARTICLE

Provided is an absorbent article including a back sheet, an absorbent layer, and a top sheet covering at least the absorbent layer. The top sheet includes a fiber layer, and a resin layer which is applied to the surface of the fiber layer in a plurality of band-shaped rows. At least one of the rows is a discontinuous row composed of discontinuous band-shaped portions arranged at a spacing in the axial direction of the row. The area not having the resin layer between adjacent discontinuous band-shaped portions in the axial direction of the row is located at least in the region covering the absorbent layer. Accordingly, the top sheet is liquid-permeable between the adjacent rows and in the area not having the resin layer between adjacent discontinuous band-shaped portions in the axial direction of the row.
