(54) **Title**: DEVICE AND METHOD FOR THE TRANSPORT OF OBJECTS/GOODS

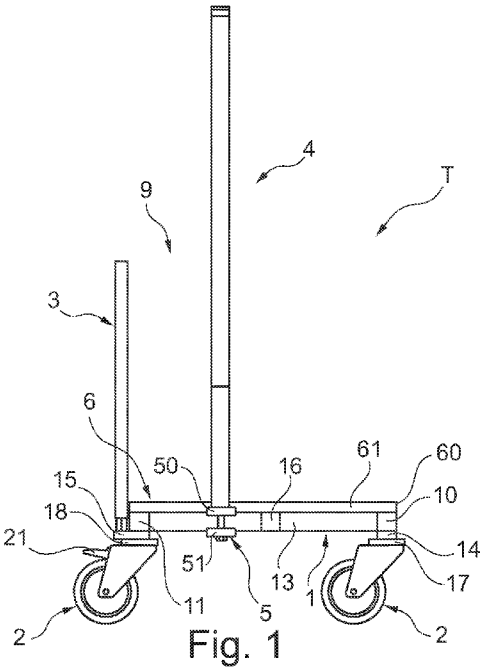

Fig. 1

(57) **Abstract**: The present invention relates to a method and a device for the manual transport of objects/goods, preferably tables, beds and the like, which object comprises a flat- shaped part extending in the horizontal or vertical direction during use, wherein the transport of said objects takes place by means of a transport device comprising a platform (1), which at its bottom side is provided with at least three wheels (2) intended to enable movement/transport of the transport device with the platform (1) in a horizontal position, and which platform (1) at its upper side is provided with at least three supports (3, 4), and wherein the method implies that said object is turned, so that its flat-shaped part is positioned in a vertical position on the upper side of the platform (1) before the movement/transport, wherein, before the turning of the object is commenced, said supports (3, 4) are adapted in such a way that the platform (1) may be arranged at the object and thereafter turn said object 90°, wherein the platform (1) takes a horizontal position with said object loaded and supported on the upper side of the platform (1). The invention also relates to a runner device and a coupling device.
