

SHUFFLED PLAYING CARDS AND MANUFACTURING METHOD THEREOF

ABSTRACT

The present invention provides shuffled playing
5 cards which eliminate the need for a game host to shuffle
cards before games by taking a lot of time as well as
eliminate the possibility of cheating. A shuffled
playing cards (1) obtained by shuffling a predetermined
number of decks of playing cards (12) using a shuffling
10 machine is packaged as an individual pack. The shuffled
playing cards (1) is individually packaged and sealed
with an adhesive label (13). A bar code (13a) which
represents a unique shuffled card ID has been printed on
the adhesive label (13). The shuffled card ID is
15 registered in a database by being associated with
information which allows identification of a shuffling
machine used to shuffle the playing card set.
