

TITLE:

MANAGEMENT DEVICE AND MANAGEMENT METHOD

ABSTRACT

5

The disclosure effectively utilizes a uniform evaluation index and a real state evaluation index for operation management of air conditioning. A building management device 101 includes a uniform evaluation value determination part 14 for determining, based on an environment measurement value of an evaluation target space, a uniform evaluation value which is a standard thermal comfort index of the evaluation target space; a real state evaluation value calculation part 16 for calculating, based on the uniform evaluation value, a real state evaluation value which reflects a real thermal sensation of a resident of the evaluation target space; and a display part 18 for displaying the uniform evaluation value and the real state evaluation value simultaneously.
