Abstract

RELEASE FILM FOR CERAMIC GREEN SHEET PRODUCTION PROCESS

5 A release film (1A) for a ceramic green sheet
production process comprises a base material (11) and a
release agent layer (12) provided on one side of the base
material (11). The release agent layer (12) is formed of a
release agent composition that contains a melamine resin
10 and a polyorganosiloxane. The melamine resin has a total
acid value of 0.030 to 0.154 mgKOH/g and a weight-average
molecular weight of 1,000 to 10,000. The release film (1A)
for a ceramic green sheet production process exhibits good
releasability and the occurrence of curling is suppressed.
