

Abstract

LAMINATED FILM AND METHOD FOR MANUFACTURING SAME

5 A laminated film having a resin layer laminated on at
least one surface of a base film. The laminated film is
characterized by: the base film being a semi-aromatic
polyamide film that has been at least uniaxially stretched;
the resin layer having a thickness of 0.03 to 0.5 μm ; and
10 the close adhesion between the base film and the resin
layer, according to the cross-cut method described in JIS
K 5600, being 95% or more.
