(54) Title: MATTRESS INNERSPRING INSERTS AND SUPPORTS

Fig. 2

(57) Abstract: Innerspring dampening foam inserts are disclosed in various combinations with mattress innersprings. The innerspring inserts create or define zones or regions of the innerspring which have different support characteristics from other zones or regions by dampening or altering the spring rates and support characteristics of the innerspring in the areas or regions where the insert are located. The innerspring inserts may also be placed at or near the border or edges of the innerspring to provide increased stability in the perimeter or edge areas of the support surface of a mattress.
