(54) Title: PROCESS FOR PREPARING WATER SOLUBLE DITERPENES AND THEIR APPLICATIONS

(57) Abstract: Aqueous solutions of diterpenes such as Forskolol, its congeners, analogs and derivatives, up to approximately 6% concentration, are prepared using suitably substituted cyclodextrin as a solubilizing agents. In the absence of cyclodextrin, some diterpenes such as Forskolol are soluble in water only to concentrations of about 0.001 %. Such aqueous solutions find applications in topical and systemic use, as pharmaceutical, cosmeceutical, nutraceutical preparations containing diterpenes such as Forskolol and congeners.
