(54) Title: METHODS OF PREPARING SOLID PARTICULATE MATERIALS

Figure 1: Microscopic images of paracetamol crystals at x200 magnification from three separate runs.

(57) Abstract: There is described a method of preparing solid particles of a compound, said method comprising controlling provision of a liquid phase, wherein said liquid phase comprises a solution of the compound, in a first flow direction to a membrane, said membrane defining a plurality of pores; and controlling the supersaturation of the liquid phase after it has passed through the membrane via the plurality of pores, to form solid particles of the compound. The method may comprise a continuous method.
