

ELECTRONIC APPARATUS HAVING VARIABLE DISPLAY AREA AND OPERATION METHOD THEREFOR

ABSTRACT

5 According to an example embodiment, an electronic device outputs, on a second
display screen, a page layout output on a first display screen along with another page layout
grouped together with the page layout in response to a screen switch from the first display
screen to the second display screen having a greater display area than a display area of the first
display screen, and switches the grouped page layouts in response to a swipe input being
10 detected.
