

Abstract

Sanitary wall installation connection box unit having an
electric line feed-through

The invention relates to a sanitary wall installation connection box unit, comprising a box housing body having a rear-side base portion (2) and a sleeve portion, and a connector body (6) disposed on the base portion. The connector body comprises at least one electric line feed-through opening (12) leading from an outer side (6a) of the connector body through the connector body to a sanitary component mounting space. The base portion (2) of the box housing body (1) is made of a sealing resilient material at least in an electric line connection region (2a) adjacent to the electric line feed-through opening, and the electric line feed-through opening (12) of the connector body (6) is covered on an outer side by a closure membrane (13) made of the sealing resilient material of the electric line connection region of the base portion.
