

ABSTRACT

The present invention is directed to providing a chemical filter replacement apparatus capable of storing a plurality of types of cartridges before transferring the cartridges to a filter fixing part. In order to implement the present invention, there
5 is provided a chemical filter replacement apparatus in which a new cartridge input to a cartridge storage part is transferred to a filter fixing part by a cartridge transfer part and coupled to a filter assembly, wherein the cartridge storage part includes a plurality of storage spaces which are separate from each other and to which a plurality of types of cartridges are input, and the cartridge transfer part transfers each
10 of the plurality of types of the cartridges to the filter fixing part.
