

ABSTRACT OF THE DISCLOSURE

An ultrafine bubble generating apparatus (300) that generates ultrafine bubbles (11) by causing a heating element (10) to generate film boiling (13) in a liquid (W) includes: an element substrate (12) including a heating part (1250) provided with multiple heating elements, in which the element substrate is configured to suppress variation of energies inputted to the heating elements in the heating part.
