

ABSTRACT

Granules or powders consisting of a compound of formula [I], in which a modal diameter is 80 μm or less, a median diameter is 45 μm or less, and/or, a ratio of (modal diameter) / (median diameter) is 1.7 or less, are preferably used for an electrolyte or the like.

[Chemical formula 1]

In formula [I], R^1 and R^2 each independently represents a fluoroalkyl group having 1 to 6 carbon atoms, or a fluorine atom, and Y^+ represents an alkali metal cation or an ammonium cation.
