(54) Title: METHOD AND SYSTEM FOR TOKEN PROVISIONING AND PROCESSING

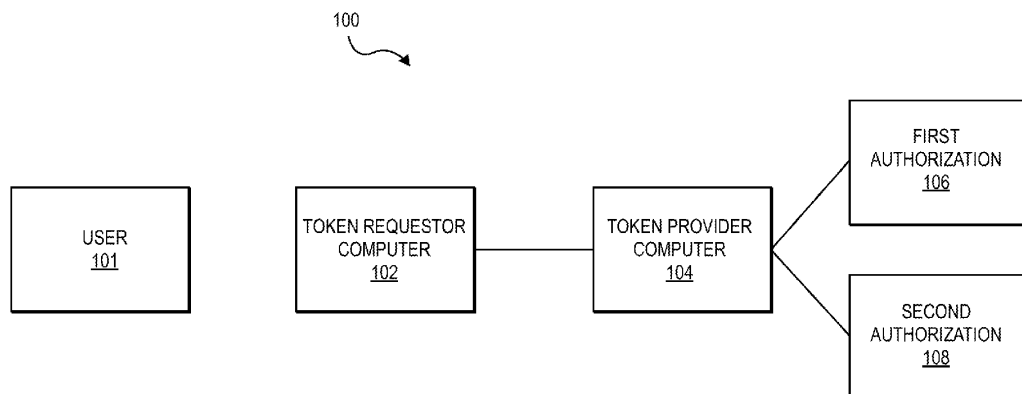

FIG. 1

(57) Abstract: A method and system for provisioning credentials is disclosed. The method includes receiving, by a token provider computer, a token request message from a token requestor computer that comprises an initial access identifier. The token provider computer transmits the initial access identifier to a first authorization computer, and then the token provider computer receives an intermediate access identifier. The token provider computer then transmits a token activation request message to a second authorization computer based at least in part on the intermediate access identifier. The token provider computer then receives a token activation response message from the second authorization computer. The token provider computer then provides the token to the token requestor computer.
