Abstract

The invention discloses an injection made from Chinese herb *Ixeris Sonchifolia Hance* for treatment of cardio-cerebral vascular diseases and fundus diseases and method of producing thereof. The injection is in a form of lyophilized powder in which the rate of flavone to adenosine is 5mg：15μg or 5mg：30μg. The flavone and adenosine from *Ixeris Sonchifolia Hance* is more stable in the lyophilized powder form than in liquid form for injection so that it is easy to control the quality of the product so as to make the medicament safe and effective. It has benefit in store.
