(54) Title: LOGISTICS CHAIN MANAGEMENT SYSTEM

(57) Abstract: A logistic chain management system which provides a network and databases to enable exporters or importers to book transport and storage facilities for all stages of the export/import transport/storage chain. Members of the logistic chain communicate over the network, where data storage, record and tracking means are provided to manage the consignment of goods as it moves along the supply chain to destination. Means to collect data corresponding to predetermined condition of the goods during transportation and storage is incorporated, and quality assurance is achieved by monitoring consignments of goods with data loggers. All participants sign an agreement including predetermined transport conditions for the goods, and a system manager monitors compliance using the data loggers.
