Contactor

15

20

A contactor constituted by a contact block (1) having a case (62) carrying stationary contacts (21,22) connected to connecting terminals (23,24) and in which is housed a moving contact-holder (3) fitted out with contacts bridges (31) which cooperate with the said stationary contacts so as to constitute a plurality of poles and by a motor unit (2) provided with an electromagnet (4) which activates this contact-holder (3) by means of an actuating lever (7) so as to open or close the contacts. The contact-case (62) has a central recess (65) and an additive module (8) connected to the terminals (431, 432) is housed in said recess (65).
