(54) Title: APPARATUS SHIELDING ELECTRONIC MODULE FROM ELECTROMAGNETIC RADIATION

(57) Abstract

The apparatus includes a cover (10) having a first surface (12) and a second surface opposed to the first surface (12). The second surface has an edge (16) defining a perimeter and a recessed region (18). A wall (20) is in communication with the recess region (18), the wall (20) and at least a portion of the edge (16) define a compartment (22). An electromagnetic interference-attenuating material is disposed in the compartment (22), and a fluid distributing manifold is disposed in the cover (10).
