(57) Abstract: A method and apparatus for aiming at a virtual object, a device, and a medium. The method comprises: displaying a user interface, the user interface comprising a virtual environment picture, and the virtual environment picture comprising a first virtual object and second virtual objects located in a virtual environment; in response to an aiming instruction, displaying a point-type aiming indicator in the virtual environment, the point-type aiming indicator being used for indicating an aiming point selected by an aiming operation on a ground plane of the virtual environment; and controlling the first virtual object to aim at a target virtual object, the target virtual object being a virtual object selected from the second virtual objects located in a target selection range, and the target selection range being a selection range determined based on the aiming point.
