

Abstract

WATERPROOF METHOD FOR FOUNDATION OF BUILDING

5

A waterproof method for a foundation of a building is applied after burying the foundation and before pouring cement, and the waterproof method contains steps of: building a temporary wall around a foundation; coating a adhesion promoting primer layer on
10 each of the temporary wall and the foundation; coating a waterproof material on the adhesion promoting primer layer so as to form a waterproof layer; and coating a adhesion promoting layer on the waterproof layer. Thereby, the waterproof method is capable of being used in a limited space of the foundation of the building to accelerate
15 construction time greatly.
