

ABSTRACT

BAGGAGE CONVEYANCE TRAY

This baggage conveyance tray is used in a sorting conveyor system for conveying baggage at airports, for example. The baggage conveyance tray (1) is equipped
5 with raised wall plate portions (6, 7) protruding on the front and rear both end portions of the tray in the length direction thereof, that is, in the conveyance direction, extending in the right-left width direction of the tray. A baggage placement surface (8) located between the front and rear both raised wall plate portions (6, 7) is concave along the length direction such that the central portion in
10 the right-left width direction is lowered while the right and left both sides are raised. Elongated protrusion portions (13) extending along the right-left width direction of the tray (1) are disposed on the baggage placement surface (8) at appropriate intervals in the length direction of the tray (1).
