METHOD AND APPARATUS FOR VERIFYING ENTITY INFORMATION

ABSTRACT

The present application discloses a method and apparatus for verifying entity information, to improve accuracy of verifying entity information. The method includes: determining location information in entity information sent by a user; determining, based on the location information, a candidate entity set whose location relationship with the entity satisfies a predetermined condition, where the candidate entity set does not include the entity; and verifying the entity information based on a result of determining, by the user, candidate entity information corresponding to the candidate entity set under a predetermined verification condition.
