

Abstract

Data Transmission Method, Transmitting Terminal Device and Receiving Terminal Device

5

The embodiments of the present application relate to a data transmission method, a transmitting terminal device and a receiving terminal device. The method comprises: packaging a first media access control (MAC) control element (CE) and a second MAC CE into a first transmission block (TB), and packaging a third MAC CE and a fourth MAC CE into a second TB, wherein the first MAC CE and the third MAC CE are the same MAC CE, the second MAC CE indicates a MAC CE that is the same as the first MAC CE, and the fourth MAC CE indicates a MAC CE that is the same as the third MAC CE; and transmitting the first TB to a receiving terminal device through a first carrier, and transmitting the second TB to the receiving terminal device through a second carrier. The data transmission method, the transmitting terminal device and the receiving terminal device of the embodiments of the present application can improve the reliability of transmission of MAC CEs.
