Abstract

[Problem] To provide a control system for a flight vehicle that causes the flight vehicle to fly autonomously without the use of GPS and without storing flight routes, and a control device for the same. [Solution] A control system 2 for a flight vehicle includes at least one marking 6 that corresponds to control information relating to control of the flight vehicle, a reading unit 12 that reads in the control information, and a flight information transmission unit 14 that transmits flight information to the flight vehicle on the basis of the control information read in by the reading unit.
