(54) Title: ENCLOSURE ASSEMBLY AND METERING APPARATUS COMPRISING SAME

Fig. 1

(57) Abstract: The present invention relates to an enclosure assembly (9) and to a metering apparatus (1), comprising a first enclosure portion (10) and a second enclosure portion (11) which are configured to be assembled by being moved towards each other along an assembly direction (A), and in a fully assembled state (F) of the enclosure assembly enclose at least a part of an inner space (3) for accommodating a metering device (4); and a fixation arrangement (13) for affixing the first enclosure portion (10) to the second enclosure portion (11) in the fully assembled state (F), wherein the fixation arrangement (13) in a fixation position (S) prevents the first enclosure portion (10) and the second enclosure portion (11) from being separated from each other. According to the present invention, the fixation arrangement (13) comprises at least one latching element (15) arranged at the first enclosure portion (10) and at least one counter latching element (16) arranged at the second enclosure portion (11). In the fixation position (S), the at least one latching element

- *in black and white; the international application as filed contained color or greyscale and is available for download from PATENTSCOPE*

(15) is in engagement with the at least one counter latching element (16), and a blocking element (25) prevents a disengagement of the at least one latching element (15) and the at least one counter latching element (16).
