

ABSTRACT

An information display method and apparatus, a terminal, and a storage medium are provided, which belongs to the field of computer technologies. The method includes: displaying (201) a first display region and a second display region of a target battle; determining (202) a selected target virtual object in response to a selection operation for first-type virtual objects; and displaying (203), in a case that the target virtual object exists in at least one second-type virtual object, first prompt information based on the target virtual object in the first display region, and displaying (203) second prompt information based on the target virtual object in the second display region.
