(54) Title: SUPPORTING ARRANGEMENT ADAPTED TO VARIOUS USERS, SITTING POSITIONS

## (57) Abstract

The present invention relates to a supporting arrangement (1) adapted to various sitting positions of a user (5, 6), comprising supporting means giving support for the legs (5a, 5b) of the user at various sitting positions, said supporting arrangement being substantially stationary mounted underneath a table top (2), and for the purpose of providing a supporting arrangement giving flexible support in various sitting positions without the supporting arrangement unnecessarily obstructing the positioning of chairs (10, 11) which are used in connection with the table top (2), according to the invention it is suggested that the supporting means comprise elements (4a-4c) projecting out from one or more table legs (3a, 3b).
