(54) Title: CUSTOMIZABLE CONTINUOUSLY UPDATED EVENT MONITORING FOR SCREENS ON COMPUTING DEVICE

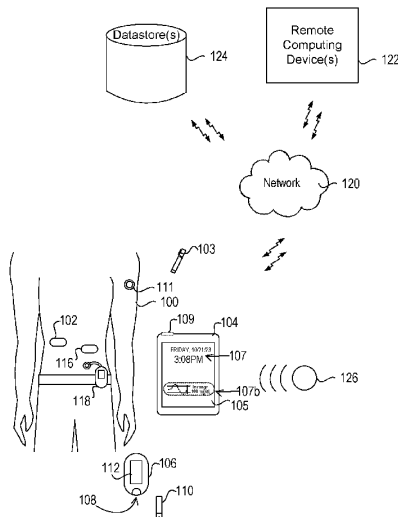

FIG. 1C

(57) Abstract: A computing device may provide access to information related to the medical condition or health of the user in the form of an overlay notification when the computing device is displaying a graphical user interface. The overlay notification may be dynamically and/or continuously updated on the graphical user interface of the device in response to updated data. The overlay notification may be enabled/disabled in response to overlay notification triggering events/overlay notification removal events. When multiple types of information are to be displayed at a time, the computing device may group the information into a common overlay notification that may be updated dynamically and/or continuously in response to updated data. As the information that is provided in the overlay notification may be sensitive information, the information in the overlay notification may be prevented from being displayed until additional input is received from the user.
