

FOLDABLE ELECTRONIC DEVICE INCLUDING HINGE LOCK STRUCTURE

【ABSTRACT】

5 An exemplary electronic device includes: a first housing including a first surface; a second housing including a second surface; a third housing including a third surface; a first hinge structure for rotatably connecting the second housing with reference to the first housing; a second hinge structure for rotatably connecting the first housing and the third housing; a flexible display disposed on the first housing, the second housing, and the third housing; a first magnet in the
10 second housing; and a hinge lock structure facing the first magnet in an abnormal state in which a part of the first surface is adjacent to the second surface, and including a pin insertable into a groove formed on at least one shaft in the second hinge structure.
