(54) **Title:** ARTIFICIAL INTELLIGENCE SELECTION AND CONFIGURATION

FIG. 127

(57) **Abstract:** A system includes an opportunity mining module structured to receive input regarding an attribute of a task or a domain, and process the input to determine if an artificial intelligence system can be applied to the task or the domain, an artificial intelligence search engine structured to receive the input, and perform a search of an artificial intelligence store of a plurality of domain-specific and general artificial intelligence models and model components using the input and/or at least one selection criteria to identify at least one artificial intelligence model or model component to apply to the task or the domain, and an artificial intelligence configuration module structured to configure one or more data inputs to use with the at least one artificial intelligence model or model component.
