(54) Title: CARD MEDIA INSERTION MECHANISM IN CARD MEDIA HOLDER**(57) Abstract**

A resilient member (7) is provided to directly or indirectly receive the pushing force to insert a card media to resist the insertion until a predetermined load is reached and then to enhance the pushing force when the predetermined load is exceeded. The switch-over point of the resilient member (7) from resisting to enhancing operation is set to be equal to the complete connection or immediately before the complete connection of the card media to the connector.
