(54) Title: SYSTEMS AND METHODS FOR DETERMINING AN INTERPOLATION FACTOR SET

FIG. 8

(57) Abstract: A method for determining an interpolation factor set by an electronic device is described. The method includes determining a value based on a current frame property and a previous frame property. The method also includes determining whether the value is outside of a range. The method further includes determining an interpolation factor set based on the value and a prediction mode indicator if the value is outside of the range. The method additionally includes synthesizing a speech signal.
